

Construction update 11/10/2025

We continue to move along and get more excited every week as we see the progress. We now have full use of our front parking lot. The north addition is nearly finished on the exterior. Inside the North addition we have painted walls, tiled bathrooms, ceilings and HVAC. The South addition has reached a major milestone, and the CMU walls of the theater have been completed. Framing of the hallways, spaceships and, new art room are near completion on the first floor. The South playground grass space is ready for us to use, and students will begin using that space this week with all new equipment.

Beginning this week, we will see the original blacktop playground area get demolished and the installation of the new playground will begin. We anticipate this being completed before Winter Break. Over the following weeks we will see more framing completed on the South addition, steel trusses installed over the new theater, cabinets installed in the North addition, continuation of electrical installed across the project, and updates to the school PA system. As more work is completed on the exterior, we expect to see less dirt and rock along our driveway. The crew does sweep often but it seems to be a constant battle keeping up with the heavy vehicles entering and exiting the work site.

Thanks for your continued support during this project. More to come.
